Sofia Digital HbbTV cases in more than 10 countries

In addition:

- Test suite development
- Logo licensing regime
- MPEG DASH DRM Reference App
- HBBTV-TA made in cooperation with DVB

70+ Members
International scope
Complete eco-system

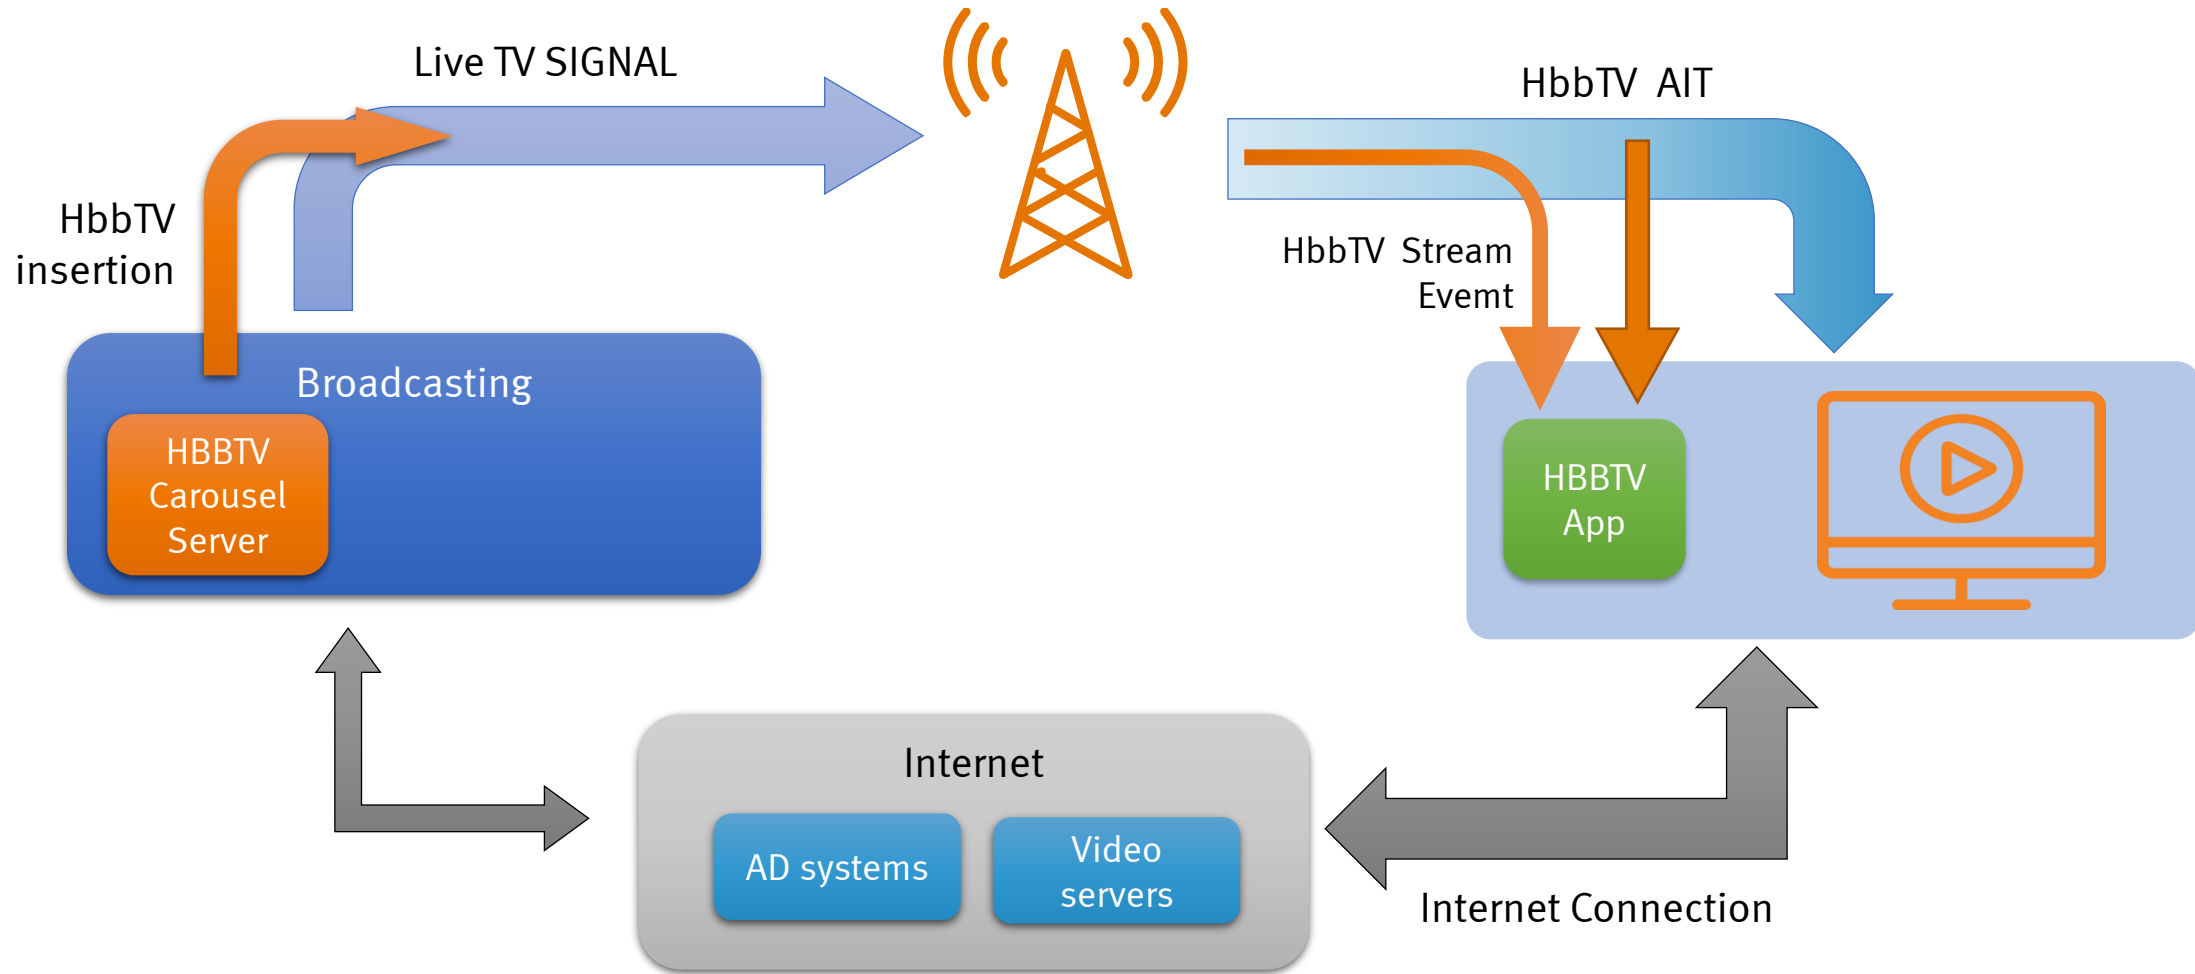

- Broadcaster
- CE Manufacturer
- Tech Providers
- Network Operators

Targeted Advertising Solution Overview From Sofia Digital

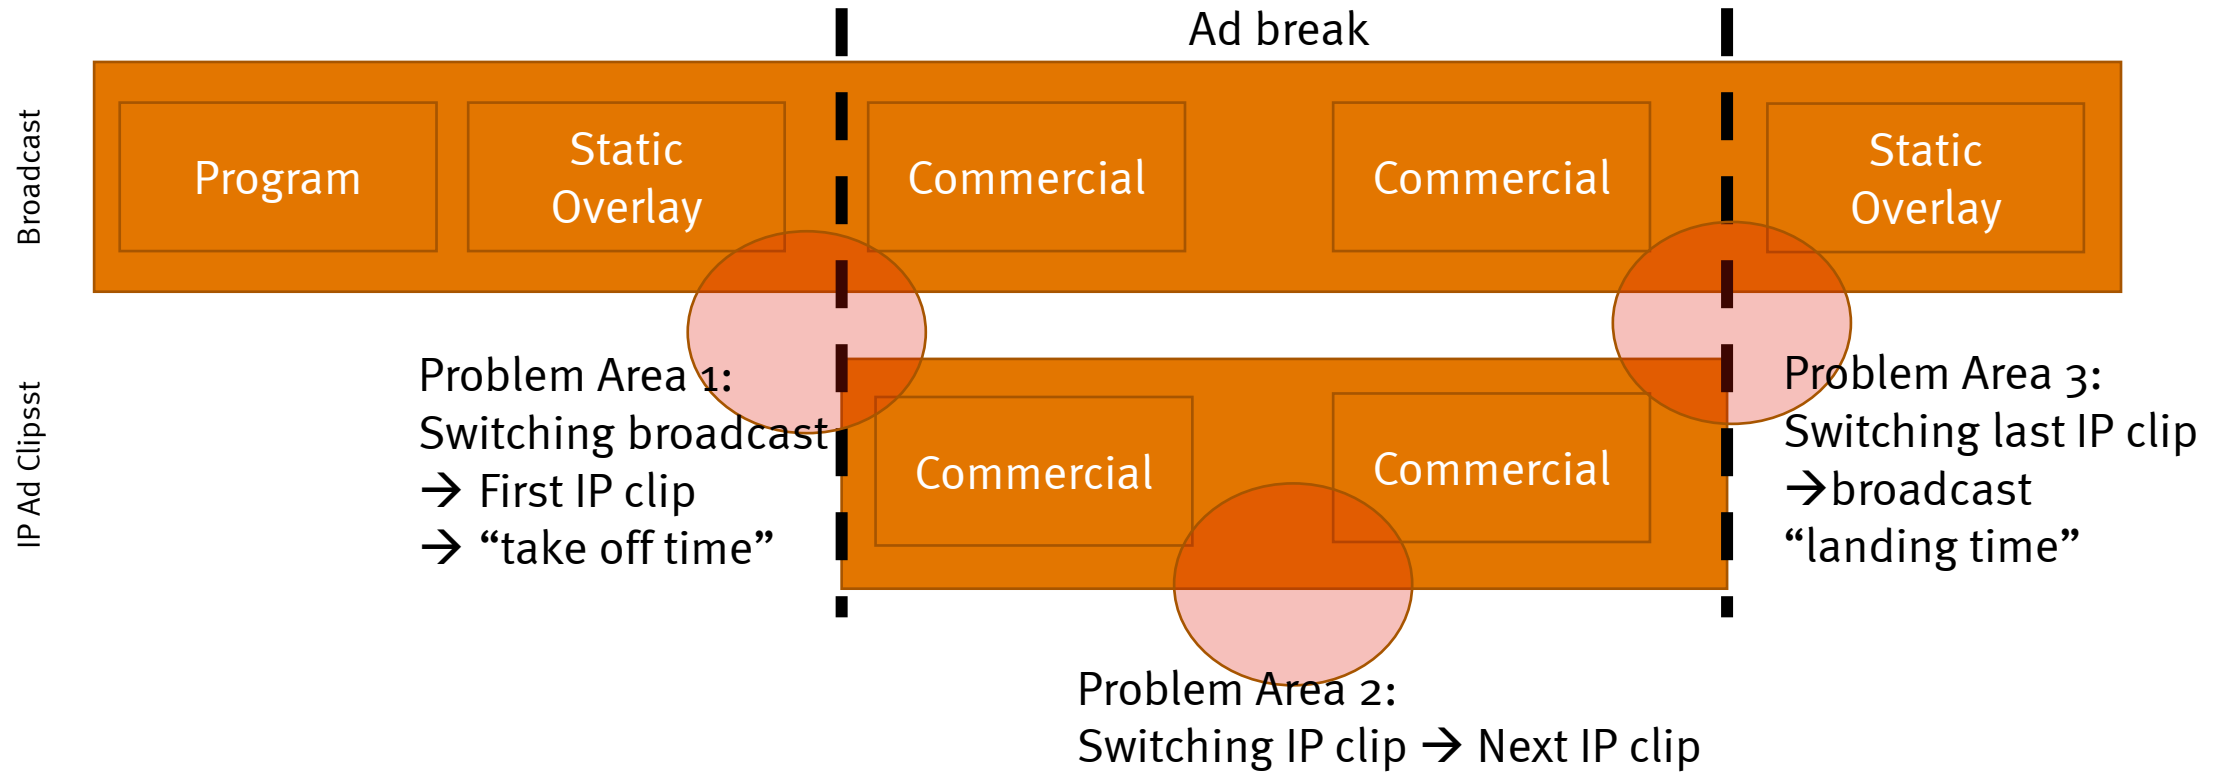

- **Sofia Digital's offering for HbbTV**
 - Sofia Digital has solution for HbbTV AD Spot replacement
 - Solution covering both DVB-transmission and client-side application (including the player)
 - Client-side Dynamic Ad Insertion (DAI) with VAST
 - Support for advertising systems backend including integration with Ad system (Synamedia Iris, Invidi, Google, Freewheel)
 - Sofia Digital support also for DVB and HbbTV TA specific standards (when HbbTV-TA compatible receivers comes available)
- **Sofia Digital TV Laboratory of over 100 devices**
 - All major smart televisions models in Nordic in last 5 years
 - Client side code optimized on different TVs based on a whitelist with parameters

Seamless User Experience Sofia Digital	Measurable Ad platform vendor
Personalized Ad platform vendor	Interactive Sofia Digital

HbbTV System Diagram

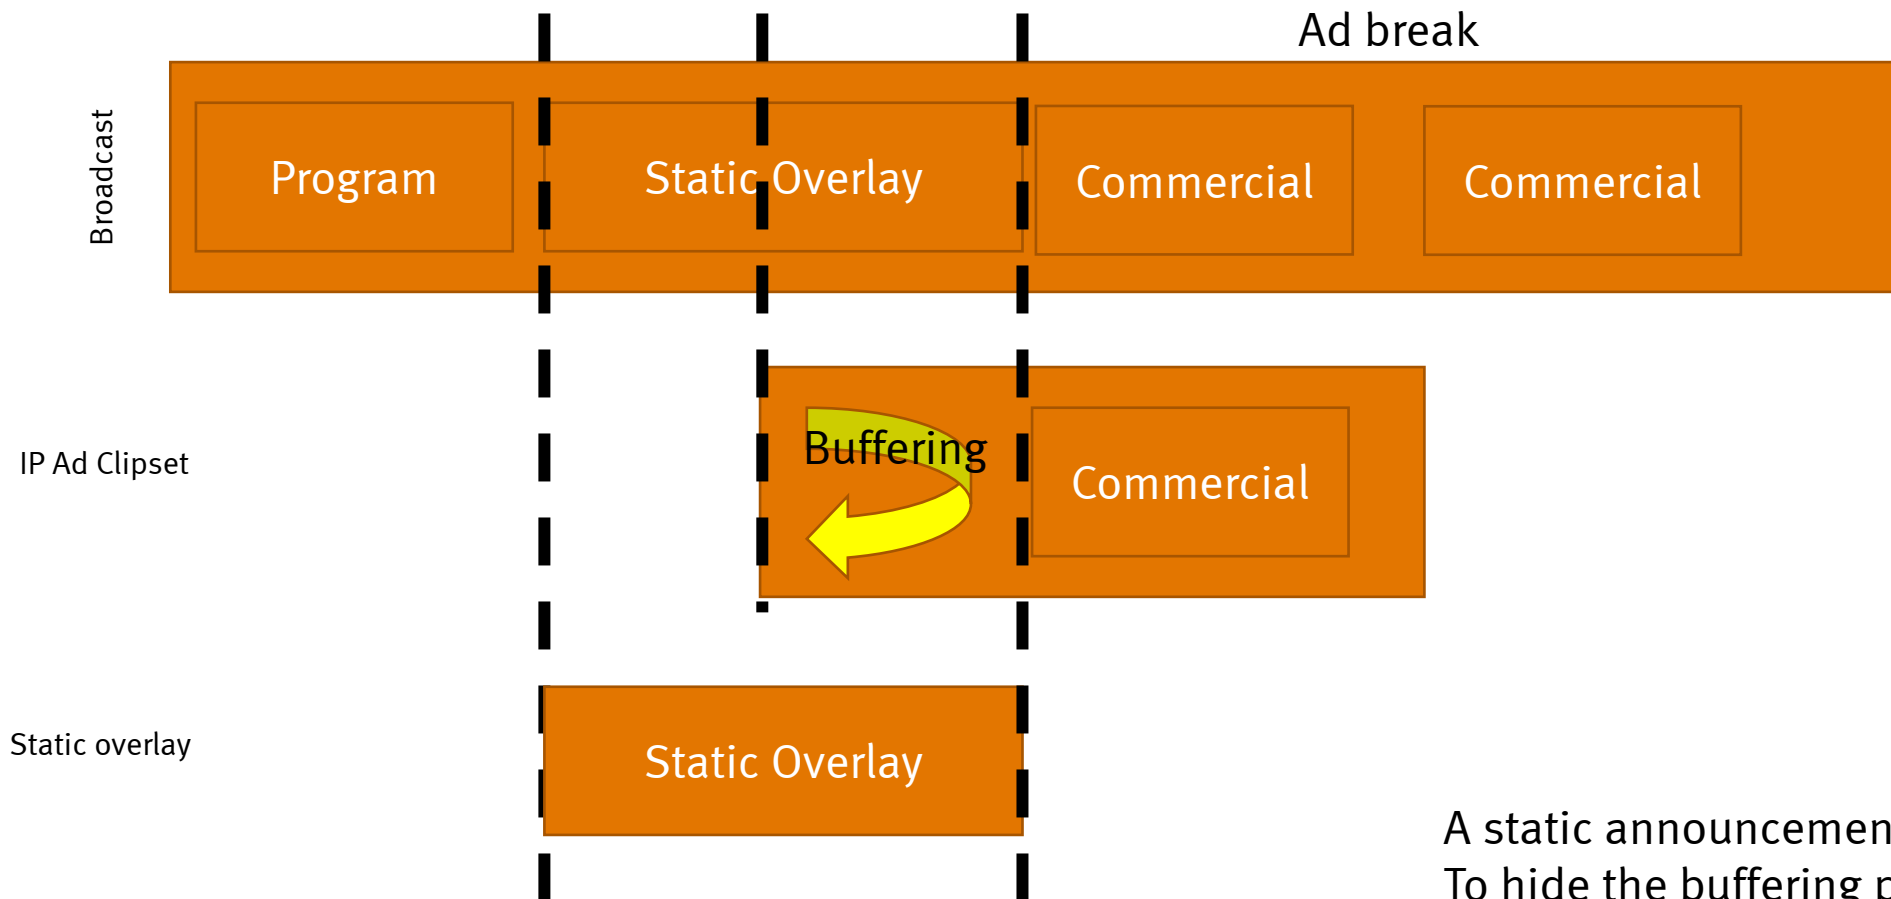

Problem Areas in Spot Replacement

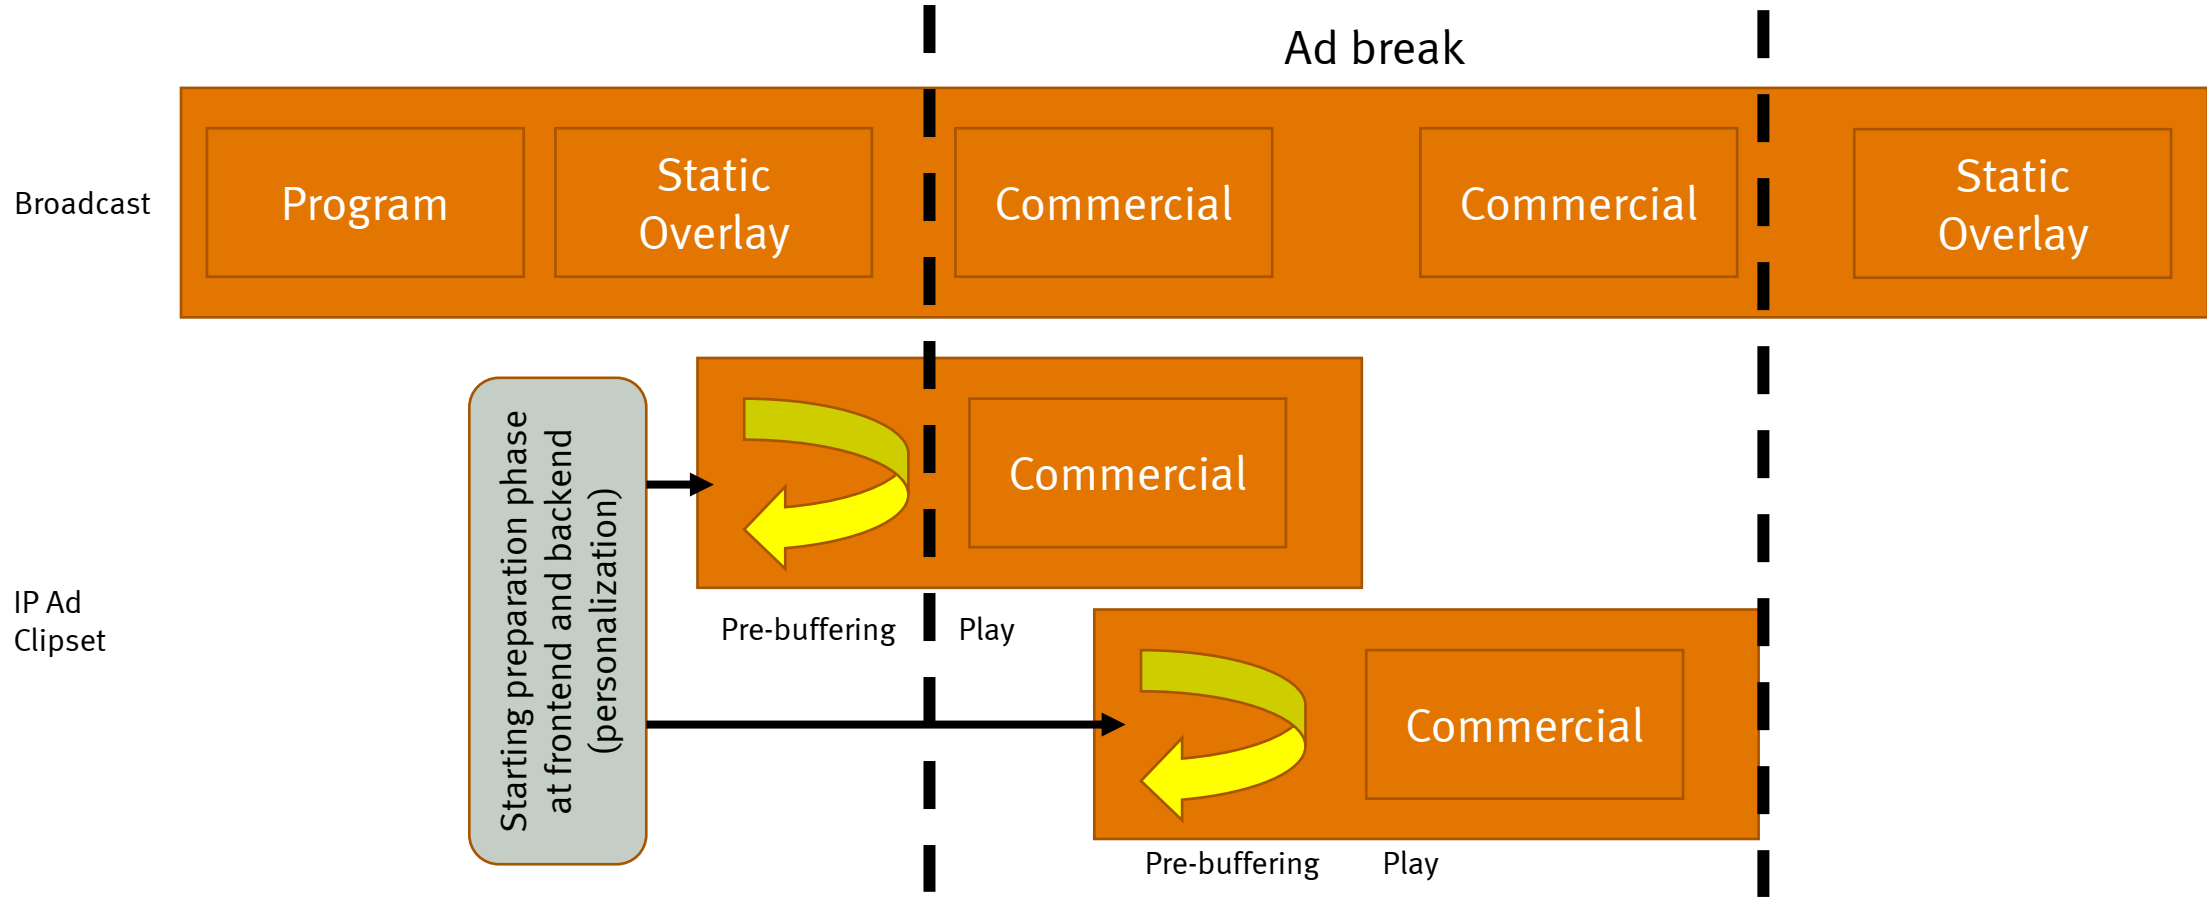

Even HbbTV 2 does NOT provide any truly frame accurate frame switching
BUT: New DVB and HbbTV standards provide a number of tools to address the problem areas

Switching Broadcast -> First Clip For HbbTV 1.5

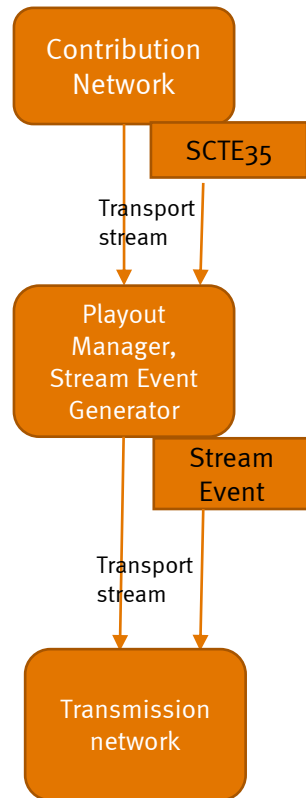

A static announcement overlay can be used
To hide the buffering phase

Improving Switching Performance Using HbbTV 2

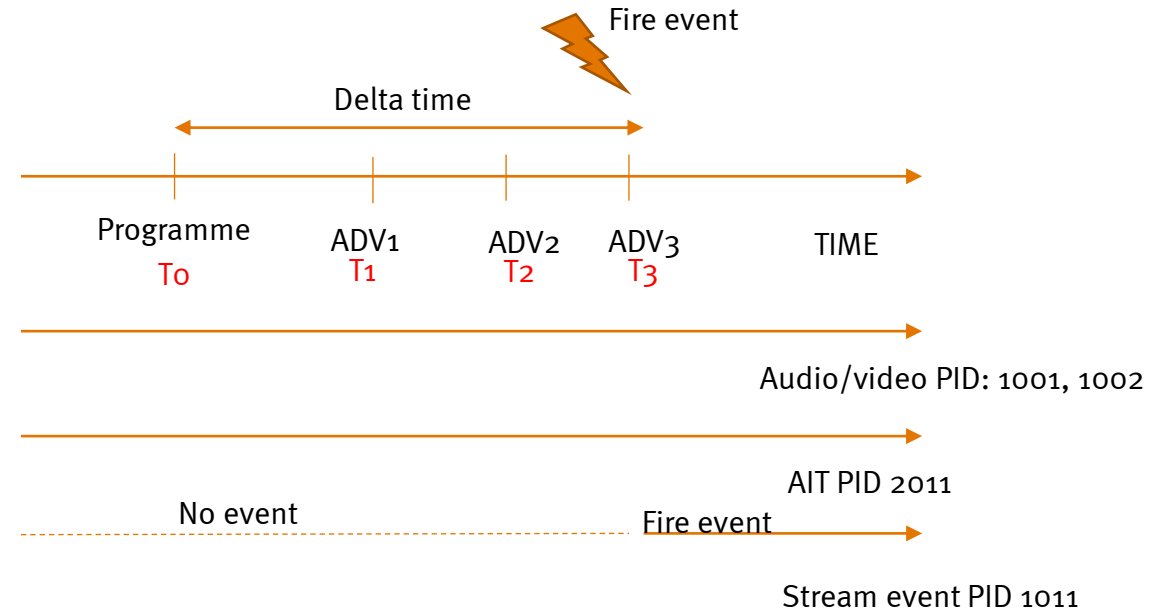

Production Workflow (SCTE35) With Optional Playout Manager

- SCTE104 used to signal substitution opportunities.
- Use existing support in many broadcast encoders to convert SCTE104 to SCTE35 messages.
- Introduce new downstream device (Sofia Backstage[®] Playout Manager) that reads the SCTE35 cue payload (including the PTS SpliceTime) and generates a single cueing Stream Event that includes the PTS of the splicing point.
- HbbTV application receives this single cueing stream event long before the substitution point, and uses it to both:
 - 1) Trigger decisioning and pre-load
 - 2) Later trigger the switch at the PTS SpliceTime specified in the event.

Case Example

- The time to launch the stream event may fluctuate depending on the program schedule alterations (delta time change)
- The transport stream contains SCTE35, which is used to generate stream event in synchronization with the program schedule
- The stream event launches the advertisement at the right time

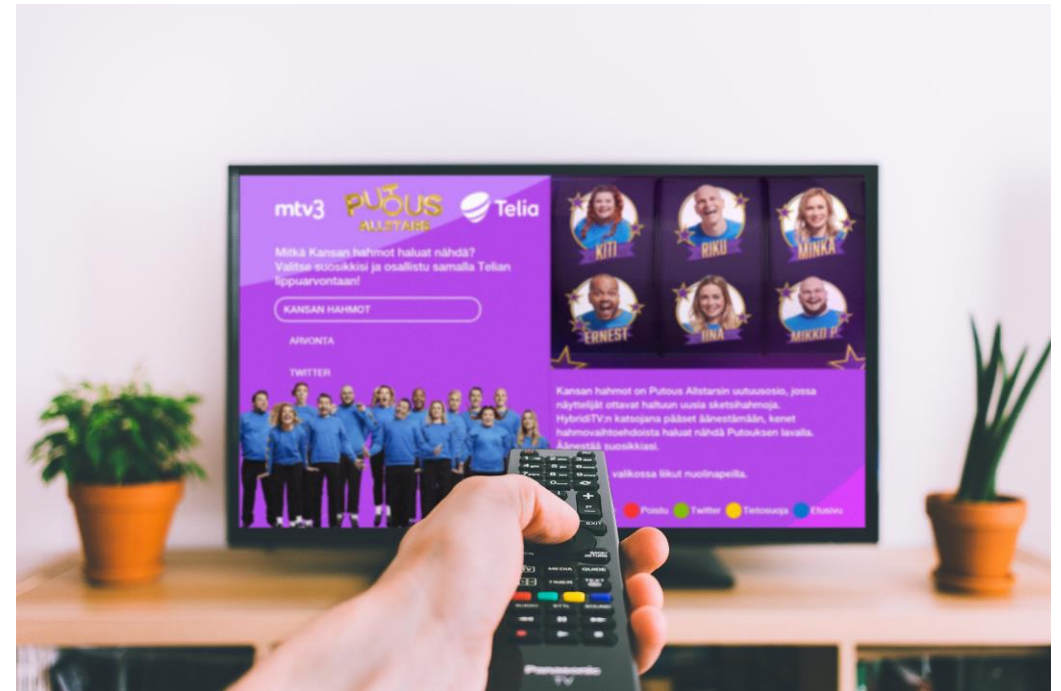

Television Laboratory

- Sofia Digital has delivered many sophisticated HbbTV applications to Mediacorp in Singapore, RTM and Mediaprima in Malaysia, MTV, Nelonen and Digita in Finland, Levira in Estonia, TRT in Turkey, Cellnex in Spain and many more around the globe.
- All applications have been tested extensively in Sofia Digital's receiver laboratory with over 100 televisions, which includes various receiver models from every major manufacturer. This ever-expanding collection includes older models since the year 2012 and all major Smart TV models from 2015 onwards as well as the latest models still to be introduced to the market.
- Working with Sofia Digital means that the customer does not need to build their own receiver zoo. Sofia Digital provides dedicated testing personnel familiar with and experienced in HbbTV related testing.
- Testing services are directed by Mr. Juha Joki, who has overseen Sofia Digital's testing services for over 10 years (since 2007).

HbbTV + OTT products available from Sofia Digital
